Summary:

I am a graduate student at Shinshu University majoring in architectural design. I have shared my life with the people of the town, and through many sketches and drawings, I have discovered their "devising for the environment as an extension of their daily lives". By applying this to architectural functions, forms, operations, and construction methods, I believe that people energize the environment, and the environment energizes people.

Historic:

1998 Born in Gifu prefecture, Japan
